

bott vario3 folding shelf

- Folding shelf for courier, express and parcel delivery service providers
- Suitable for everyday work-related uses in many other industry sectors thanks to its flexibility
- Well-ordered parcel and goods transport, optimum space utilisation and maximum safety

Foldable shelf system:

Provides particularly quick and ergonomic access to the contents.

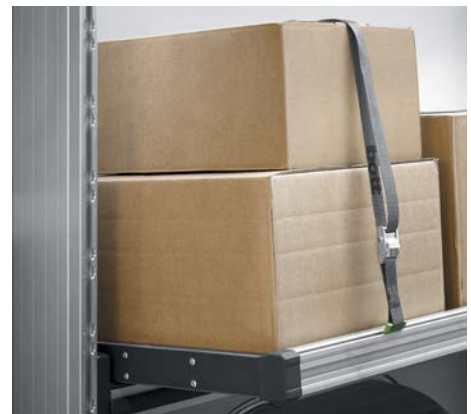

The cargo area is still a very comfortable width with the shelves folded down, even if these are the maximum depth. They can be folded up in between the end frames segment by segment.

Handling comfort:

The integrated folding mechanism ensures that the shelves remain safely locked in the folded away position.

Lashing eyes on the end frame and the floor ensure that awkwardly-shaped loads that require additional restraint inside the vehicle can also be secured in the best possible way.

Durable and quiet: Acoustic seals minimise road noise while protecting shelving components, ensuring long-term durability.

- **Reliable load restraint:** Flexible C-Lash straps as well as integrated non-slip shelf liners keep the transported goods securely in place and prevent them from sliding about whilst on the road.
- **Attractive design:** Thanks to its timeless design, bott vario3 impresses in every respect and combines functionality with a modern look and ensures that your customers will always view you as a top-class professional.
- **Particularly lightweight, but also robust and reliable:** bott vario3 combines an extremely low unladen weight with outstanding robustness and a high load capacity – it is therefore also ideal for the safe transport of heavy goods.

Versatile:

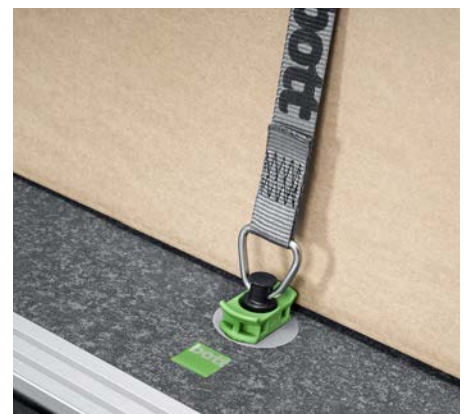

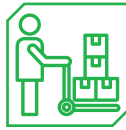

Ideal for a wide range of industries such as courier, parcel and express delivery service providers, florists, supporting everything from spare parts distribution and vending machine restocking to home delivery and broader last-mile logistics.

Easy to retrofit:

The bott vario3 folding shelf can easily be added to vehicles used by tradespeople and service technicians – for example for transporting awkwardly-shaped goods. When the shelves are folded away, the aisle widths measure more than one metre, which makes it possible to also transport pallets.

Suitable for almost all vehicles:

The bott vario3 folding shelf is designed to fit any vehicle, regardless of manufacturer.

- **Improved order in the load space:** The optional integration of LED strip lights ensures an optimum illumination that makes it quick to find parcels and goods even in poor light conditions.
- **Flexible transport on the last mile:** The choice of three shelf depths (410, 510 and 610mm) ensures perfect adaptation to any transport job – if necessary also with up to three shelves on top of each other.
- **Enhanced organisation in the load space:** Lashing eyes integrated into the floor ensure that awkwardly-shaped loads that require additional restraint inside the vehicle can also be secured in the best possible way with additional lashing straps and shoring poles.
