For the Best

Workshop and
workplace storage
equipment for
the best

From Gaildorf to the world

For almost 100 years, we have carried out our development work, inspections and conversions here in the heart of Swabia, Germany. We have always remained true to the values that the people of this region are renowned: exacting precision, applying high standards to everything we do, and a passion for thinking outside the box.

We also continue to see our future here, where tradition and innovation go hand in hand.

Whilst we have a growing global network of branches and partners, we nevertheless continue to invest heavily into the place where our roots lie.

Workshop and workplace storage equipment that contributes to your success.

With our workshop and workplace storage equipment, you create workspaces that impress with efficiency, order and safety. High-quality materials, clear lines and a logical design ensure that your tools and machines are to hand at all times and perfectly protected.

Cupboards, drawer cabinets or workbenches – our various solutions can be combined flexibly, increase your productivity and create ergonomic workplace conditions. As they are robust and designed for daily use, you can rely on them for many years to come – day in, day out.

International

Because we love what we do!

From the preliminaries to the construction.

Preliminaries

We examine everything closely and listen listen carefully in order to fully understand your workplace, your processes and your requirements.

We show you how to make better use of your available space and suggest process optimisation options. In addition, we also improve your workspace ergonomics and create a uniform look to ensure that your workshop and workplace storage equipment is as functional as possible.

Planning

With the aid of state-of-the-art planning and configuration tools, our experts develop a tailor-made concept for your future workspaces. All functional features, modules and equipment details are precisely matched to your needs, and 3D visuals are created.

You can therefore already imagine what your future workshop and workplace storage equipment will look like and how it will work at the planning stage. This ensures transparency, gives you planning certainty and results in solutions that are well thought out down to the smallest detail.

Installation

The meticulous care that characterises our planning process also extends to the on-site installation of our solutions.

Our certified fitters will install your workshop and workplace storage equipment precisely and exactly when you need it. Quality is always our priority. Components are carefully fitted, adjusted and tested to ensure that your workshop and workplace storage equipment performs reliably at all times from day one.

Experience

Professional workshop and workplace storage equipment

bott offers tailor-made workshop and workplace storage equipment for servicing workshops and garages, production facilities and all kinds of tradespeople – from carpenter and electrical engineers to metalworkers or building services providers. Our modular equipment ranges, e.g. cubio and verso, as well as additional storage solutions our bottBoxes, Systainers³ and perfo panels, ensure that everything is always kept in perfect order in your workshop, ergonomically designed and as efficient as can be.

Made-to-measure workshop equipment

Servicing workshops and garages, production facilities and tradespeople have to deal with a complex variety of tasks on a daily basis. They need well-structured, robust and flexible solutions that their work processes. With bott's support workshop and workplace storage equipment, you can create an environment where your tools and materials are kept in order, stored safely and are easily accessible. Ergonomic workplace solutions are also better for your team's health and increase overall productivity.

Simply superior

Workshop and workplace storage equipment from bott makes your day-to-day work easier, safer and well-structured. It is extremely versatile and suitable for tradespeople, service technicians, maintenance service providers, local services providers as well as training and teaching workshops. It offers the following impressive benefits:

Extreme robustness and durability

Our modular equipment is made from high-quality materials and designed for daily heavy use.

Clear organisation and accessibility

All tools, machines and materials have their fixed places and are always to hand. This saves you time and keeps everything neat and tidy.

Ergonomic, well-designed workspaces

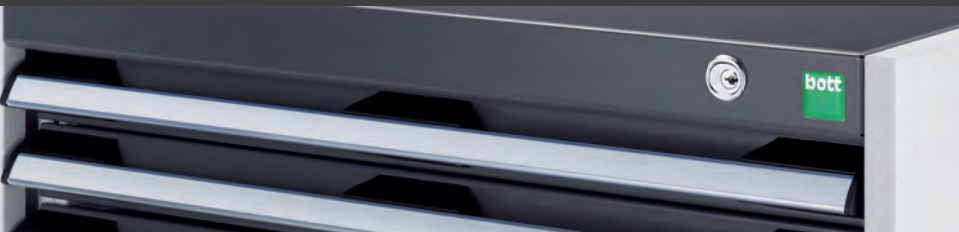

Individually adjustable working heights and sensibly arranged elements create ergonomic working conditions.

Modular and extendable solutions

bott's modular ranges can be adapted flexibly and easily added to when you need more.

Secure storage for tools and materials

Even sensitive tools, machines or hazardous materials are reliably stored in accordance with the applicable legal requirements.

Transparent planning

Our sales representatives are far more than brand ambassadors: they will advise you expertly, understand complex requirements and deliver tailor-made solutions. Thanks to their extensive specialist knowledge, our team responds flexibly to any situation – whether this involves technical issues, strategic questions or individual on-site customer support.

Angebot P123H0008794-03 Ihr Werkstattkonzept - Neubau

Sehr geehrter Herr Mustermann,

vielen Dank für das Gespräch gestern vor Ort. Aufgrund Ihrer Anforderungen und Wünsche hat unsere Planungsteam ausgearbeitet.

Anbei erhalten Sie das entsprechende Angebot mit einem präzisen Vorschlag, abgestimmt auf Ihre Räumlichkeiten und die gewünschten Abläufe. Die ausgewählten bott Lösungen stehen für robuste, modulare und skalierbare Konzepte, die Ihre Prozesse optimal unterstützen wird.

Für Rückfragen oder Anpassungswünsche stehe ich Ihnen jederzeit gerne zur Verfügung und freue mich auf die nächsten Schritte.

Mit freundlichen Grüßen

Furthermore, our 3D configurator helps you to specify your workshop and workplace storage equipment requirements in a clear and visual way. You do not need to be thoroughly familiar with our products. With just a few clicks, you can create a visual basis for your future working environment. It provides us with an excellent starting point, allowing us to understand your ideas, optimise them purposefully and then draw up a tailor-made quotation for you.

Our after-sales service team ensures that your workshop and workplace storage equipment continues to work as it should. You can always order accessories at a later date and flexibly extend additional the existing solutions.

Up-to-date information

Customer testimonials, exciting projects and new bott products – our regular newsletters provide an authentic insight into the world of workshop and workplace storage equipment.

Koblenz fire brigade – high-quality equipment for the workshop

For top-level service: Schöler Linde opts for bott

Customer testimonials:

ORGATEX

“ORGATEX modernised its production facilities with CI compliant cubio workshop and workplace storage equipment consistently implemented its lean approach. Mobile drawer cabinets, perfo walls according to 5S and special battery and environmental cabinets ensure flexibility, keep everything in order and promote a smooth material flow. In addition, ergonomic workbenches, pull-out shelves and LED lighting also create a perfectly organised and professional working environment.”

Press release excerpt from bott news

University of Exeter

“bott provided an excellent service and was always available to discuss our requirements. No detail or issue was left uncovered. bott was able to promptly suggest solutions when we had to overcome challenges and always took our feedback on board. The supplied workbenches look amazing and upgrade the space.”

Joanna Duffin, Project Lead, University of Exeter's Maker Space project

Caterham Cars

“We wanted a workshop area that matched our existing garage. The versatility and adaptability of bott's verso range made our decision easy. We are extremely satisfied with the professional new look of our assembly workstations and the comprehensive support provided by the bott team. I can only recommend that we continue to cooperate with bott in the future.”

Colin Vaughan, Service Manager, Caterham Cars

Does your job require you to stay organised at all times, even when you're on the road?

Then our equipment is perfect for you.

For the
best
customers

Maintenance without going the long way round

- Mobile drawer cabinets allow your team to carry their tools and materials directly to where they are needed inside your workshop. They don't have to walk about as much, which results in smoother processes.
- Furthermore, an on-board power supply increases your flexibility when responding to servicing requests, as this makes it possible to directly connect any testing and diagnostics tools. After all, every second counts, so your customers can set off on the road again as soon as possible.

- Having your customer's caravan serviced in your workshop before their next long trip guarantees that it is roadworthy. All servicing, maintenance and repair jobs should to be completed quickly to ensure that their departure is not unnecessarily delayed.

Clear structures, a designated place for everything and a logical arrangement create order in the workshop.

A neat and tidy workspace ensures smooth processes and efficient working, from the vehicle handover to its return to the customer.

Pit stop performance without time loss

- In motor racing, winning comes down to precision and speed. This applies in the workshop as much as it does out on the racecourse. Every move counts – both during the pit stop for maintenance and repairs and when it comes to hitting the racing line.
- Robust work surfaces racecourse withstand even the heaviest use. They are durable enough to withstand tools or components being dropped onto them with force. Your working environment therefore remains in excellent condition, even when you are working at full throttle.

- Clear structures and an ergonomic arrangement speed up the workshop processes. They create the basis for maximum efficiency and save a significant amount of time. All of the tools and spare parts have their designated place on your own starting grid and are quickly to hand.
- Optimised repair and modification processes ensure that your team can work precisely, even under time pressure, so the vehicle is back on the race track as soon as possible.

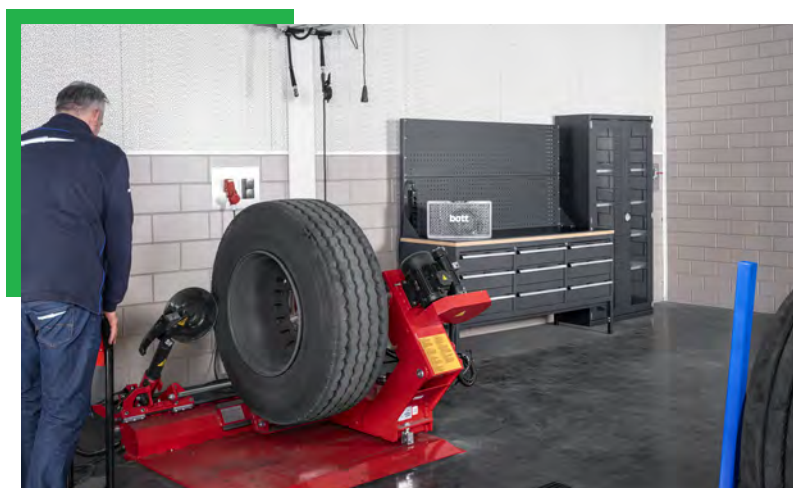

**Basis for maximum efficiency;
saves a significant amount of time.**

Uncompromisingly robust

All lease returns undergo a thorough technical inspection before they are sold as used HGVs. It focuses particularly on every vehicle's beating heart – the engine. Once this has been reconditioned and thoroughly cleaned, it is carefully reassembled and put back into the vehicle. Step by step, the HGV is serviced until it is almost as good as new.

- Working on heavyweight vehicles also calls for a working environment that can cope with heavyweight repairs. The workshop and workplace storage equipment must therefore be designed specifically for heavy weights and intensive use. This robust equipment does not need to be handled with care.
- On the inside of the cupboards, a perfo pegboard keeps everything in order. Even heavy tools have their fixed place here and are always to hand. This creates order in an environment where the dimensions may be large, but precision is just as important.

Expertise at first sight

A professional garage is the best advertisement

A plain and timeless design with bott products reflects your focus on what matters most: making sure that everything works well.

It makes a good first impression.

- Workshop and workplace storage equipment that is ergonomic and clearly structured speeds up processes. Ergonomic seating, cleverly designed EDP desks as well as maintenance trolleys, drawer cabinets and integrated testing equipment create a working environment whose efficiency is visible to the customers.
- The equipment details are also impressive: galvanised drawers with full extension slides and a load capacity of up to 200kg per drawer provide maximum stability and full access. Functionally integrated aluminium bins for recyclables – with one to three units, depending on the requirements – ensure organised waste separation and are easy to empty thanks to the integrated side handles.

Everything is quickly accessible but always looks neat and tidy. The result is a garage workshop that communicates expertise and quality, from the first impression to the completed service.

Passion meets precision

Working on motorcycles usually involves more than just technical expertise.

It calls for a passion for two-wheeled vehicles as well as excellent mechanical engineering skills. Whether a major repair job or a quick service – each bolt and each component requires meticulousness and a systematic approach.

- Well-designed workshop and workplace storage equipment creates the requisite basis: all tools, small parts and consumables are stored safely and in a way that makes them quick and easy to find. Clearly structured cupboards and drawers ensure smooth motorcycle maintenance and servicing processes.
- Ergonomic groove handles provide precise and comfortable access, regardless of how often they are used. Boxes for small parts keep everything in order and ensure that bolts, gaskets and couplings are to hand at all times. The result is a working environment that is a perfect combination of a passion for fixing two-wheeled vehicles and excellent organisation.

Metalworking – systematic efficiency

- The modular and individually customisable workshop and workplace storage equipment adapts precisely to your production processes. Here, a robust design for industrial use meets optimised ergonomics and the careful consideration of occupational health and safety aspects. The result: more efficient, safer and consistently reliable work sequences. The integration of digital processes is just as possible as a combination with bott's vehicle and workplace systems, thanks to our decades of experience in the servicing and maintenance area.

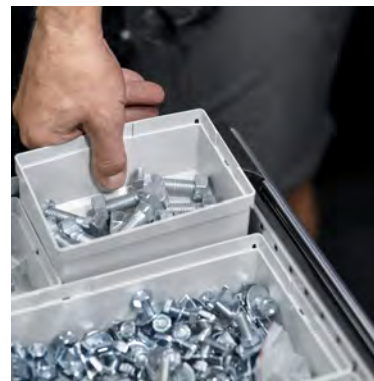

- Our wide variety of workbenches, drawer cabinets and tall cabinets facilitates the design of precise solutions for a wide range of different requirements in the manufacturing sector. All the components are always perfectly matched and offer outstanding reliability, functionality and user-friendliness.

Order
Quality
Efficiency

Order for professionals

- Perfo panels keep everything neat and tidy. The modular system can be adapted flexibly to meet your requirements and can be extended at any time. Thanks to hooks and brackets, all tools and small parts are exactly where you need them – in their proper place, directly in sight and within easy reach. Everything is therefore always in order, which makes it possible for you to respond to a call-out as quickly as possible.
- Even the smallest screw has its fixed place in the cleverly designed drawer organisers. Thanks to the well-arranged drawer dividers, you'll instantly find the part you need, regardless of how tiny it may be. With a load-bearing capacity of up to 200 kg, these robust assistants are also designed for constant use.

- A drop-down vice offers tradespeople additional flexibility and makes their everyday working lives easier. It can be ready to use in seconds. When it is not in use, it can be stowed away just as quickly and takes up very little space – but is nevertheless always on hand as soon as it is needed.

Order meets office

- Order also has a major effect on productivity in offices. However, looks also really matter here. The timeless, simple design of the cubio workshop and workplace storage equipment easily blends into modern office environments. It combines well-organised storage with a professional look. Whether office stationery, files or personal possessions: there's a place for everything.

- Compact mobile drawer cabinets offer additional storage space for office stationery and personal possessions. If necessary, they can be locked so that valuables can also be stored securely.
- At the same time, these mobile solutions also promote modern work concepts: in offices with a desk sharing policy, the staff can simply move them to any desk they are working on, which creates a flexible work environment.

Overview
Flexibility
Productivity

Made for winners

- In the racing area, reaching the winner's podium also starts with a perfectly organised workshop. Our full production environment is not only impressively functional but also looks good. Painting it in the corporate design supports the brand and promotes the team's identification with the company.
- Individual production and maintenance bays create clearly defined work areas where all of the components are assembled, serviced and repaired.

- Especially in the motorcycle racing area, servicing is of major importance. A well-arranged and orderly workshop is decisive for excellent achievements beyond the racetrack. It provides the basis for ensuring that the bike is ready to return to the track as soon as possible – and therefore for a top performance and a guaranteed place on the podium.

Performance
Precision
Organisation

Learning through a structured approach

- A modern, visually appealing and contemporary environment is essential for ensuring that tomorrow's qualified tradespeople can learn their trade. A well-organised workspace helps trainees understand where everything belongs and supports a clear, structured approach to learning.
- On hexagonal workbenches, the trainees learn some of the basics, such as filing, drilling and grinding. The requisite tools are stored in drawer cabinets directly at the workstation. Each workspace is structured identically and can therefore be used by any trainee.

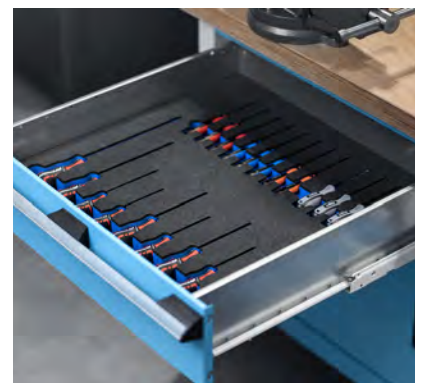

- bott helps vocational training providers design effective training workshops – that meet the needs of both trainees and trainers.
- bott's modular learning environments promote hands-on, flexible and future-proof vocational training.

Guidance
Training
Structure

Workshop fit for the future – mobile training equipment

- Trainees who want to shape the future of transport also need a future-proof learning environment. At Exeter College in the UK, bott installed a range of different cubio workbenches in the state-of-the-art training workshop where trainee mechanics can practice MOT inspections. These functional, safe and robust workbenches are perfectly equipped for working on vehicles with combustion engines as well as electric vehicles.

- The equipment used by the trainees ranges from high-voltage components for electric vehicles to heavy machine parts. The respective storage facilities must therefore have a high load-bearing capacity, and they must be mobile and flexible. They also have to meet the requirements of the various forms of training. The mobile cubio workbenches with heavy duty castors and sturdy work surfaces permit flexible room layouts. At the same time, they help with the various training formats in a dynamic learning environment.

Flexibility
Functionality
Expertise

- Order and accessibility are particularly important in vocational training that involves a high level of practical, hands-on learning. Our mobile workbenches make it possible for the trainers and trainees to gather around a central workstation – for example in order to identify an engine problem or to demonstrate safety procedures when working on electric vehicles.

Precision for high-flyers

- Every day, the helicopter servicing company Castle Air works on machines that call for the utmost precision. To ensure that everything runs as smoothly on the ground as it does in the air, they installed a combination of cuboid drawer cabinets, tall cupboards and workstation systems that is more than eleven metres long.
- Space-saving perforated solutions create order and ensure that all tools and materials are quickly to hand. This reduces the time spent on looking for something and increases the productivity.

- The tailor-made layout can be adapted flexibly and seamlessly extended at any time to make it possible for the company to continue to work efficiently regardless of any future changes in requirements.
- The cubio range was developed for demanding applications.. It is particularly durable, designed for heavy use and has a high load-bearing capacity. Castle Air is therefore also perfectly prepared on the ground for the next take-off.

Flexibility
Functionality
Expertise

Co-working space for tradespeople

- At the trades and services centre *Handwerker- und Dienstleistungszentrum* (HDZ), various trades operate under one roof. The HDZ is a co-working space for tradespeople and an environment where the infrastructure, work areas and workshops are shared. To ensure that the cooperation runs smoothly and produces high-quality results, we equipped the garage workshop with our cubio workshop and workplace storage equipment. It offers plenty of storage space and ensures that the materials and tools are kept neat and tidy, and to hand directly beside the vehicle.

- Mobile drawer cabinets ensure that everything is within easy reach and promote flexible work processes, which saves time. Besides its versatile functionality, the sophisticated design of the cubio workshop and workplace storage equipment is also an important factor, as a tidy garage environment with a professional, stylish look makes a good impression on the HDZ's customers.

Networking
Exchange
Productivity

The perfo panel system

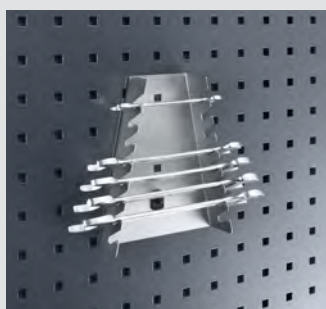

One system – limitless possibilities

The perfo panel system ensures that all tools and materials are stored in an orderly and structured way. They can be integrated into the doors of two-door cabinets or as a functional workspace back wall solution.

Fully equipped stationary or mobile perfo racks offer you maximum flexibility in your workshop and elsewhere.

As an element of assembly lines and individual workstations, perfo panels ensure that the right tool is always to hand at the right moment. Thanks to individually adjustable holders, screens are mounted at eye-level whilst the equipment is within easy reach. This not only improves the workflow but is also more ergonomic.

perfo: order at all times –
flexibility with impact.

The Systainer³ case system

Transport the Systainers in a space-saving and safe way.

Whether in the workshop, in the service vehicle or on site with the customer – keep everything neat and tidy with the Systainer³. Thanks to various sizes, an organiser with a transparent lid and the fact that everything can be clearly labelled, it takes only seconds to find your tools, screws and small parts.

Robust materials and the smart T-LOC locking system ensure that your equipment is carried safely and you stay flexible – from transport through to your mobile workbench. The Systainer³ is therefore a genuine system component that makes your day-to-day work more efficient and professional.

- The Systainer³ organiser systems were jointly developed by bott, Festool and TANOS – as a standard modular system for the storage and transport of tools, machines and consumables. The cases can be stacked safely, effortlessly connected and easily integrated into vehicles, workshops and workspaces.
- As it helps to keep all machines, tools and consumables well-organised, the system makes the everyday working lives of tradespeople and service engineers less complicated.

The flexible case system for your workshop and your vehicle

bottBoxes

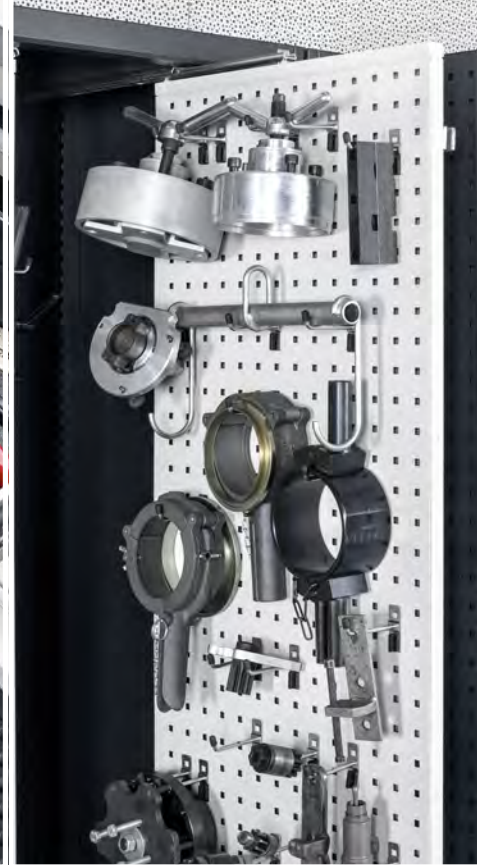

The practical bottBox is an award-winning bott innovation: small parts can be stored in a well-organised way and easily accessed.

The bottBox viewing window can be taken out and moved towards the back. The transparent pane can therefore be used to dispense just the right amount of the small parts. The material can simply be taken out of the front area of the bottBox: the bottBox becomes the parts tray. bottBoxes can be arranged systematically on the shelf with the aid of coloured front clips. bottBoxes can also be labelled on the back and can therefore also be used as a shelf or material box.

Perfect small parts organisation

Details matter
when it comes to
organisation

The logo for 'bott' is displayed in white lowercase letters on a solid green square background.

Equipping a workshop involves taking so much more into account than merely the requisite cupboards, drawer cabinets and workbenches.

A properly equipped workshop is a workspace that assists you – in a structured, safe and efficient way. Well-thought-out functional features, robust materials and a clever arrangement create an environment that makes your work easier, speeds up processes and makes it possible to keep everything neat and tidy at all times.

**Customise your workspace to match your needs:
ergonomically designed, for transparent processes and maximum safety, every single day.**
